14. ABSTRACT (Maximum 200 words):

This report summarizes findings from the 1996 Survey on Officer Careers (SOC). SOC is a continuation of the Longitudinal Research on Officer Careers (LROC) survey research program. The LROC program called for similar surveys to be mailed to a longitudinal sample of company grade officers each year over a number of years. Surveys were administered in 1988, 1989, 1990, and 1992. The SOC was first administered in May of 1996. Samples for SOC included all officers who had responded to any of the LROC surveys and who were still on active duty, as well as a new randomly-drawn cross-sectional sample of officers at all ranks. This report summarizes findings for the new 1996 cross-sectional sample of officers. The SOC continues to provide data on the values, attitudes, family situations, and career experiences of Army officers who are serving in Army Competitive Category branches. SOC results will be used to test models of work, career, family, and personal factors that influence officers' career decisions. The SOC also provides a rich longitudinal database for examining the Army experience from a long-term perspective.

FOREWORD

In 1987, the Vice Chief of Staff of the Army tasked the U.S. Army Research Institute for the Behavioral and Social Sciences (ARI) with continuing the officer research initiated by the U.S. Military Academy in the mid-1980's (Project Proteus). In 1988, ARI substantially revised both the Proteus survey and the sampling plan. This marked the beginning of the *Longitudinal Research on Officer Careers (LROC)* survey research program. The *LROC* program called for similar surveys to be mailed to a longitudinal sample of company grade officers (second lieutenant through captain) each year over a number of years. Surveys were administered in 1988, 1989, 1990, and 1992.

In 1995, ARI revised the *LROC* survey and expanded the sampling plan to include a cross-sectional sample of officers at all ranks (second lieutenant through colonel). The revised survey was renamed *Survey on Officer Careers (SOC)* and was first fielded in April of 1996. The Army Personnel Survey Office at ARI conducts the *SOC* biennially. A number of questions in the *SOC* track to the *LROC* survey and will allow a trend analysis linked to 1988 as ARI continues this longitudinal project.

The SOC continues to provide data on the values, attitudes, family situations, and career experiences of Army officers who are serving in Army Competitive Category branches. The SOC results are being used to test models of work, career, family, and personal factors that potentially influence officers' career decisions. The SOC will also provide a rich longitudinal database for examining the Army experience from a long-term perspective.

Findings from the 1996 SOC were distributed in four short topical papers over a one-year period. These papers focused on officers' attitudes at the time of the survey and addressed issues of interest to a variety of Army agencies. This report is a compendium of those papers. Trend analyses comparing LROC and SOC findings will be the subjects of future reports.

Appendix C. Briefing Charts for Differences in Attitudes Toward the Army Among Racial and Gender Groups					

The U. S. Army Research Institute has been collecting information on officer attitudes on a number of topics and issues of importance to both Army leadership and the officer corps. The effort began with the administration of the Longitudinal Research on Officer Careers (LROC) survey from 1988 to 1992 and continues with the Survey on Officer Careers (SOC). The SOC was fielded for the first time in 1996 and will be conducted on a biennial basis.

The 1996 SOC was mailed to a random sample of officers stratified by rank and source of commission. Minority and female officers were over-sampled to allow the survey results to be compared by both race and gender with a sampling error of $\pm 5\%$ or less. Over 10,000 officers responded to the 1996 SOC. The longitudinal sample comprises approximately 500 officers who responded to at least one of the four versions of the LROC project and also responded to the SOC.

The SOC is a compilation of a large number of the original LROC items and a group of new items, some of which have been used in other Army survey instruments (a copy of the 1996 SOC is at Appendix A). The SOC covers a variety of issues, including leader development, current assignment, Army life, Army life expectations, family matters, and current events. Items found to be useful as composites or scales include: satisfaction with supervision, with peers, with promotions, and with work; tolerance of military demands; civilian vs. Army standard of living; civilian market ease of entry; characteristics of the job; organizational commitment; and retention propensity.

A key goal in analyzing the 1996 SOC data was to ensure that findings from the survey were available in a timely fashion to both policy makers and the officer corps. To that end, four short topical papers were published. These papers focused on officers' attitudes at the time of the survey and addressed issues of interest to a variety of Army agencies. Topics included: (1) officers' career expectations by type of branch assignment, (2) officers' attitudes by commissioning source, (3) officers' intentions to remain in the Army, and (4) differences in officers' attitudes toward the Army among racial and gender groups. These short papers, which addressed selected topics from the survey, were published over a one-year period and were disseminated to Army staff and members of the officer corps by request. The purpose of this Study Report is to offer a compendium of those papers in a published report for a wider audience.

Future plans include trend analyses for a number of the items in the survey, survival analyses (how officers who stay in the Army differ from those who leave), and briefings or reports in response to specific requests of Army leaders. Current reports and briefings will be updated with results from the 1998 SOC and future SOC surveys.

For additional information on the SOC program, contact June Taylor Jones, Survey Statistician, Army Personnel Survey Office, 703-617-7807, jonesj@ari.army.mil.

1. Career Expectations by Type of Branch Assignment

Background: The branches (or career fields) to which Army officers are assigned can be separated into four broad categories—combat arms (CA), combat support (CS), combat service support (CSS), and special branches. Each of the first three categories identifies a group of branches related by their functions on the battlefield. ¹

Focus: This section of the report focuses on the perceptions of a subset of more than 5,500 company grade officers (second lieutenant through captain). Most of these officers had been in the Army for 10 years or less and were at a stage of their individual careers where they were still making decisions about their future with the military. Analyses will identify whether there were differences in officer career expectations based on type of branch assignment.

Findings: A number of measures were used in analyzing career expectations by type of branch. These measures included the length of time officers would like or *desired* to serve, the length of time they *expected* to serve, their current career intent, and other less direct measures of career expectations, including officers' perceptions of command opportunities, advancement opportunities, and their satisfaction with certain aspects of Army life.

A large majority of company grade officers were not eligible to retire at the time of the survey and may still have been weighing the pros and cons of staying in the Army until retirement. Measures of an officer's competitiveness for promotion and satisfaction with the Army are also good indirect indicators (or moderators) of career expectations and career intent-that is, officers who are satisfied may be more likely to stay.

Length of Career. SOC respondents were asked to report both how many years they would have liked to have completed by the time they leave the Army and how many years they expected to have completed. Figure 1 depicts, by type of branch, the percent of company grade officers who reported 20 years or more to each of these questions.

There are no differences by type of branch assignment in the percentages of company grade officers who would have *liked* to serve at least 20 years (ranging from 75% to 77%) and those who *expected* to serve at least twenty years (ranging from 62% to 63%). However, the majority of these officers, regardless of type of branch, were significantly more likely to indicate that they *expected* to serve fewer years than they would have *liked* to. For example, 77% of company grade CA officers would have *liked* to serve for 20 years or more; however, only 61% *expected* to serve 20 years or more.

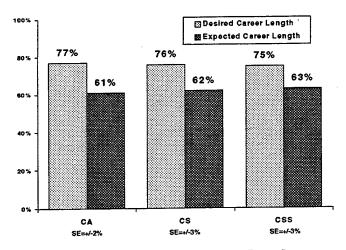

Figure 1. Desired and Expected Career Length

There were no differences among individual branches within CS or CSS. However, there were some variations among

¹ The special branches include officers who are in the medical, dental, religious, or legal fields.

CA branches.² Infantry officers were most likely to *desire* (80%) and *expect* (69%) to serve at least until retirement, while Engineer officers were least likely to *desire* (72%) and *expect* (55%) to do so.

Current Career Intent: There were two additional items on the SOC that dealt directly with career expectations. The first of these items asked the respondents to rate, at the time they completed the survey, whether they were planning or leaning toward an Army career, were undecided, or were planning or leaning toward a civilian career.

There were no differences by type of branch in reporting career plans. About three out of five officers (ranging from 58% to 60%) reported that they were planning or leaning toward a career in the Army (Figure 2).

There were no significant differences among individual CS or CSS branches. Among the CA branches, Infantry officers (64%) were most likely to report they planned an Army career while Air Defense Artillery officers (52%) were least likely to do so.

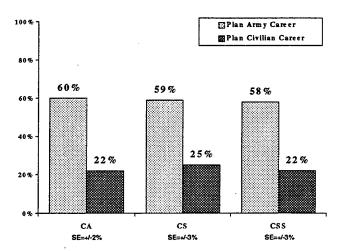

Figure 2. Planning an Army vs. Civilian Career

The second career intent item (Figure 3) asked respondents to rate their individual career intentions on a scale of "1: I plan to stay beyond 20 years," to "6: I will definitely leave upon completion of my obligation." As with the previous career intent item, there were virtually no differences by type of branch with over half (ranging from 54% to 58%) of all company grade officers reporting that they intended to stay until retirement or beyond.

Among the individual CA branches, Infantry officers (63%) were most likely to report that they intended to stay at least until retirement while Engineer officers (47%) were least likely to do so.

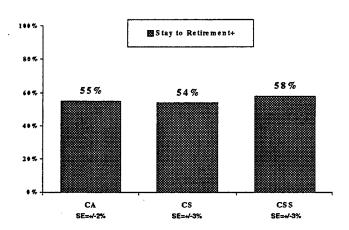

Figure 3. Current Career Intent

Command Opportunities. In the Army's promotion system, having the opportunity to command tends to increase an individual's competitiveness for promotion and thereby continuation in service. Perceptions of opportunities to command in an individual's current branch varied significantly by type of branch (Figure 4). Company grade officers in CA branches (59%) were significantly more likely than CS (30%) or CSS (51%) officers to report that opportunities for command in their branches were very good or excellent.

² There are too few respondents from the Special Forces (n=74) and Finance Corps (n=93) to include them in the analyses of individual branches.

Among individual CA branches, Infantry officers (67%) were most likely to report command opportunities were very good or excellent while Aviation officers (48%) were least likely to do so.

Among CS branches, Military Police (64%) were most likely to be positive about their command opportunities while Chemical Corps officers (7%) and Military Intelligence officers (13%) were least likely to be positive.

Among CSS branches, Transportation Corps officers (60%) were most likely to be positive about command opportunities while Adjutant General Corps officers (23%) were least likely to be positive.

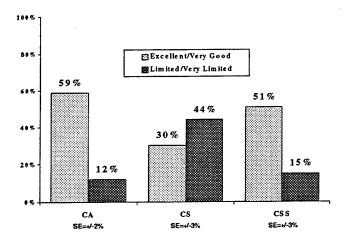

Figure 4. Command Opportunities

Advancement Opportunities. CSS officers (67%) were significantly more likely than officers in CA (61%) or CS (60%) branches to report that the chances for advancement within their branches were very good or excellent (Figure 5).

Among individual CA branches, Engineer officers (65%) were most likely to report their chances for advancement were very good or excellent while Air Defense Artillery officers (51%) were least likely to do so.

Within CS branches, Military Police (65%) were most likely to be positive about advancement opportunities and Chemical Corps (46%) officers were least likely to be positive.

Among CSS branches, Transportation Corps officers (75%) were most likely to be positive and Ordnance officers (61%) were least likely to be positive.

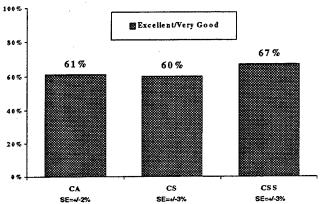

Figure 5. Advancement Opportunities

Satisfaction with the Army. Another indicator of career expectations is satisfaction with the Army. The SOC contains measures of satisfaction with a variety of facets of Army life including satisfaction with current assignment, life as an Army officer, and career prospects. Figure 6 shows that there were virtually no differences by type of branch for any of these three items. The majority of all officers were satisfied or very satisfied with both their current assignment (ranging from 67% to 72%) and with life as an officer (ranging from 76% to 78%). While there were no differences by type of branch, significantly fewer officers reported satisfaction with career prospects in the Army (ranging from 53% to 57%) than satisfaction with current assignment or for life as an officer.

Within the individual branches there were no differences in satisfaction with current assignment or life as an officer. However, for CA branches and CSS branches there were differences in satisfaction with career prospects.

Within the CA branches, Infantry officers (60%) were most likely to be satisfied with career prospects and Air Defense Artillery officers (47%) were least likely to be satisfied.

Within CSS branches, Adjutant General Corps officers (67%) were most likely to be satisfied with career prospects while Transportation Corps officers (50%) were least likely to be satisfied.

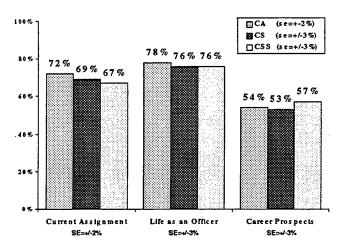

Figure 6. Satisfaction Levels

Summary: Type of current branch assignment does not appear to have an influence on the career expectations of most company grade officers. Only one item resulted in a significant difference by branch type: Company grade officers in CA were significantly more likely than CS or CSS officers to rate their opportunities for command as very good or excellent.

For the remaining items, there were no differences based on type of branch assignment. In summary:

- 76% of all company grade officers would have liked to serve at least 20 years
- 61% were planning or leaning toward an Army career (as opposed to a civilian career)
- 56% planned to stay at least until retirement
- 62% rated their advancement opportunities as very good or excellent
- 70% were satisfied with their current assignment
- 76% were satisfied with life as an officer, and
- 55% were satisfied with their career prospects.

2. Officer Attitudes by Commissioning Source¹

Background: Army officers are commissioned through several sources including Reserve Officer Training Corps (ROTC) graduates; graduates from the U.S. Military Academy (USMA); Officer Candidate School (OCS), which promotes enlisted soldiers into the officer corps; and direct commissioning for officers entering Army occupations in the professional (doctors, attorneys, etc.), technical (warrant officers), or scientific arenas.

Over the past few years, several studies have focused on the costs of producing officers through the service academies compared to the ROTC or OCS programs. At issue is whether the academies and, to a lesser extent, ROTC scholarship programs are "worth" their relatively high price tags. How long officers stay in the Army and their attitudes and experiences are of interest in this debate.

Many factors, including officers' attitudes and career intentions, are germane to this issue. Attitudes are important to consider, given their relationship to performance and behavior in general. If there are differences in officer attitudes based on their source of commission, what do these differences imply about future performance and behavior?

Focus: This section of the report is based on a subset of approximately 8,000 officers who were commissioned into the Army through ROTC or USMA (officers who received their commission through direct appointment or through Officer Candidate School were not included). Analyses compare attitudes and career intentions by source of commission.

Findings: In rating pre-commissioning military training (Table 1), USMA graduates were most likely—and ROTC non-scholarship officers least likely—to agree that their training prepared them

- for subsequent training at their officer basic course,
- to conduct oral presentations and briefings,
- to write memos and short reports, and
- to be an effective officer.

Table 1. Effectiveness of Pre-Commissioning Training

% of Officers Who Agree/Strongly Agree	ROTC-S (scholarship)	ROTC-NS (non-scholarship)	USMA
My pre-commissioning military training (USMA, ROTC, OCS) prepared me to	SE=+/-2%	SE=+/-2%	SE=+/-2%
 master the requirements of my 			
Branch Basic Course	58%	53%	81%
• conduct oral presentations and briefings	69%	61%	95%
write memos and short reports	55%	45%	89%
• be an effective officer	78%	73%	95%

¹ See Appendix B--Briefing on Officer Attitudes by Commissioning Source.

² Argetsinger, A. (1997, August 12). Academies Stir Some Doubts, Some Salutes. The Washington Post, pp. A1, A13.

Table 2 shows that USMA officers were also significantly more likely than their ROTC counterparts to . . .

- be currently assigned to a branch which was their "first choice,"
- be assigned to a Combat Arms (CA) branch,
- want to be assigned to a CA branch, and
- report a close fit between initial expectations and the reality of their branch duties.

The majority of both USMA and ROTC officers . . .

- believed the Army provides the same or better job security than civilian organizations,
- were satisfied or very satisfied with their current job,
- were satisfied with their chances for promotion, and
- believed their opportunities for advancement are excellent or very good.

While the majority of officers responded positively to the job satisfaction items in Table 2, there were significant differences based on commissioning source for two of these items:

- compared to ROTC scholarship graduates, a smaller proportion of non-scholarship graduates were satisfied with their promotion opportunities
- USMA graduates were least satisfied with their current jobs.

Career Intent: The SOC contained a number of questions to assess officers' career intent. In contrast to their more positive responses in Tables 1 and 2, USMA graduates were the least likely (54%) to report that they were planning to stay in the Army until retirement (upper half of Table 3). ROTC non-scholarship graduates were the most likely (75%) to report that they were planning to stay in the Army until retirement, followed by ROTC scholarship graduates (62%). The differences among the three groups are statistically significant.

Table 2. Officer Attitudes on Selected Survey Items

BRANCH SATISFACTION ITEMS	ROTC-S SE=+/-2%	ROTC-NS SE=+/-2%	USMA SE=+/-2%
Current branch "first" choice	66%	63%	87%
Currently assigned to combat arms (CA)	50%	50%	80%
Want to be in CA	53%	55%	78%
Close fit between expectations and duties	67%	69%	73%
JOB SATISFACTION ITEMS			
Same or better job security than civilian	85%	84%	87%
Satisfied/very satisfied with current job	77%	79%	72%
Satisfied/very satisfied with promotion opportunities	65%	60%	64%
Advancement opportunities excellent/very good	61%	57%	59%

Table 3. Current Career Intent for Officers by Source of Commission

Survey Items	ROTC-S	ROTC-NS	USMA
Which of the following best describes your current career intentions?	SE=+/-2%	SE=+/-2%	SE=+/-2%
Plan to stay until retirement or beyond	62%	75%	54%
Plan to stay beyond my obligation, but am undecided about staying until retirement.	18%	13%	17%
Undecided whether I will stay upon completion of my obligation	9%	5%	12%
Probably or definitely will leave upon completion of my obligation	12%	6%	17%
Planning/leaning towards an Army career at each of the			
following seven points in time:	54%	56%	55%
1-When I began pre-commissioning training	54 <i>%</i> 68%	74%	63%
2-When I received my commission 3-After first leadership assignment	68%	75%	63%
4-After first staff-type assignment	60%	71%	54%
5-At the end of the Advanced Course	75%	82%	72%
6-After first company command assignment	86%	88%	84%
7-Right now	65%	73%	57%

As shown in the lower half of Table 3, the same pattern is apparent when officers were asked to assess their career intentions at various points over time—i.e., ROTC nonscholarship graduates were the most likely and USMA graduates were the least likely to report that they were planning on, or leaning towards, an Army career at six of the seven points of time.

Possible Reasons Why USMA Graduates
May Leave Early: Additional analyses
indicated that USMA graduates were
significantly more likely than ROTC graduates
to believe that a career move into the civilian
sector would be easy and would have positive
benefits, not only in terms of their own

individual career prospects and benefits, but also for their families.

Table 4 shows that USMA graduates were most likely to believe that civilian life offers better opportunities in terms of pay, standard of living, overall quality of life, advancement opportunities in one's chosen field, total family income, and spouse/family satisfaction, and that the transition to civilian life would be easy or very easy for them.

In contrast, ROTC non-scholarship graduates were least likely to report that civilian life offers better opportunities and were most likely to report that their spouses supported an Army career and were satisfied with the Army life and the Army's support

Table 4. Officer Ratings of Career and Family Benefits With Civilian Job

Survey Items	ROTC-S SE=+/-2%	ROTC-NS SE=+/-2%	USMA SE=+/-2%
Percentage reporting following benefits somewhat			
or much better in civilian life			
Pay	70%	63%	87%
Overall standard of living	60%	54%	73%
Overall quality of life	58%	54%	67%
Opportunities to advance in chosen field	41%	36%	52%
Percentage believing transition to civilian sector would			,
be easy or very easy Finding a good civilian job right now	53%	44%	68%
Leaving the Army in the next year	37%	27%	51%
Percentage reporting that spouse/significant other (SO) is supportive of or satisfied with the Army			
Spouse/SO supports an Army career	74%	84%	71%
Overall, spouse/SO is satisfied with Army life	58%	65%	54%
Spouse/SO satisfied with Army support for family	44%	50%	44%
Percentage believing civilian life would have positive impact on family [these are representative, but are not all of the items reviewed]			
Total family income better in civilian life Employment/educational opportunities better for	71%	65%	86%
spouse	55%	54%	59%
Spouse's overall satisfaction better in civilian life	64%	58%	69%
Time for personal/family life better in civilian life	86%	86%	87%
Better quality of child care/schools/youth facilities in			
civilian life	41%	42%	48%

for families. They were also least likely to think it would be easy to find a good civilian job.

The majority of all officers believed that time for personal and family life would be better in civilian life.

Summary. There are statistically significant differences in officer commitment to an Army career among the three commissioning sources examined.

USMA officers were most likely to believe a return to civilian life would be easy and beneficial in terms of career opportunities and family life. Conversely, ROTC nonscholarship officers were most likely to report that they planned to stay in the Army to retirement and that their spouse/SO supported an Army career and was satisfied with Army life and the support the Army provides for families.

3. Officers' Intentions to Remain in the Army

Background: An understanding of factors related to officer turnover can help the Army better manage retention, forecast personnel requirements, and maintain necessary staffing levels.

Focus: This section of the report focuses on the perceptions of officers in the ranks of second lieutenant through lieutenant colonel and examines the relationships between selected officer demographics and career intent. Demographic characteristics at the time SOC 1996 was conducted showed that 85% of Army Competitive Category officers were male, 15% were female, 77% were White, 12% were Black, and 5% were Hispanic.

Findings: In the analyses, officers were classified into three groups (Figure 1): those who intended to remain in the Army until retirement or beyond retirement eligibility (68% of officers), those who were undecided about when to leave (22% of officers), and those who indicated they were likely to leave at the end of their current obligation (10% of officers).

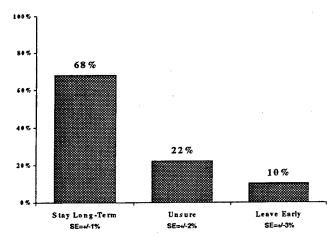

Figure 1. Officers' Career Intent

There was no difference in the intention to stay in the Army between second and first lieutenants, with about one out of five reporting they intended to leave early and 40% reporting they were undecided (Figure 2). However, as rank increased, the likelihood of reporting an intention to stay in the Army also increased. About two out of three captains and more than nine out of ten majors and lieutenant colonels reported that they intended to stay in the Army long-term.

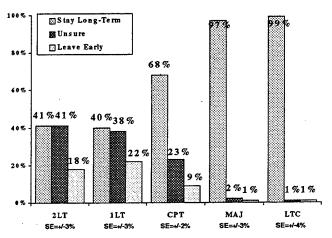

Figure 2. Intention to Stay by Rank

Additional analyses were conducted to simultaneously examine the relationship between intention to remain and a range of personal characteristics and career variables. Besides rank, these included: current status (Regular Army or other), years of service completed, current branch type (CA, CS, CSS), command assignment, commissioning source, gender, race, educational attainment, marital status, and presence of young children in the household.

The pattern of being more likely to remain as rank increases (shown in Figure 2 above) did not change significantly when the other personal characteristics and career variables were also included in the same analysis (although the differences among ranks did not remain as large as in the figure above).

Commissioning source was associated with intention to stay. Individuals who received a commission after completing Officer Candidate School were significantly more likely than others to report an intention to remain in the Army (Figure 3). Of officers commissioned through ROTC, those who held an ROTC scholarship were less likely to report intending to stay than officers who did not have a scholarship. Officers who were commissioned through USMA were the least likely to report intending to remain in the Army.

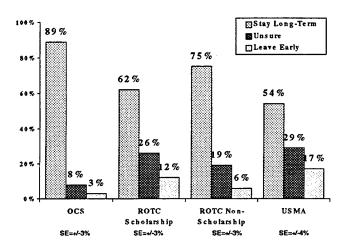

Figure 3. Intention to Stay by Source of Commission

What factors might account for these differences? Prior military service could be a contributing factor. Persons who had been in Officer Candidate School or in an ROTC program but without a scholarship were more likely than others to have had prior active-duty military experience. The lure of civilian job opportunities also seemed to have an impact. USMA graduates anticipated the least difficulty

finding a good civilian job. They also were more likely to indicate that they believed that pay and opportunities to advance in the civilian sector were better than in the military. These differences were found for both male and female USMA graduates, but were more pronounced for male officers.

Other features of an officer's educational and parental background also were associated with career intent. Officers who had been enrolled in Junior ROTC in high school were slightly more likely than others to report intending to stay in the Army. A similar finding emerged for officers with an Army parent or guardian. Having attended a military high school, however, was not a significant factor. Overall, officers with master's degrees had a higher propensity to stay than those with higher or lower levels of education (Figure 4).

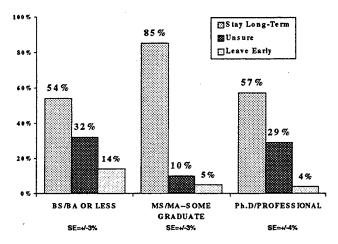

Figure 4. Intention to Stay by Level of Education

Differences by race, ethnicity, and gender were also examined and are discussed in detail in Section 4 of this report. Briefly, compared to White and Hispanic officers, Black officers were significantly more likely to report an intent to remain in the Army long-term and male officers were significantly more likely than female officers to report that they intended to remain in the Army long-term.

Summary. Overall, the majority of Army officers (68%) intended to stay in the Army for 20 years or longer. Differences by commissioning source in the intention to remain in the Army showed that OCS officers were most likely and USMA officers were least likely to intend to remain until retirement. (A more thorough investigation of these differences was explored in Section 2 of this report.)

Rank, educational attainment, and perceived civilian job opportunities were also found to be significant factors associated with intent to stay until retirement.

Compared to White and Hispanic officers, Black officers were significantly more likely to report an intent to remain until retirement and male officers were significantly more likely than female officers to report that they intended to stay until retirement.

4. Differences in Attitudes Toward the Army Among Racial and Gender Groups¹

Background: Attitudes towards and perceptions of the Army were analyzed to determine whether there were differences among White, Black, and Hispanic officers—as well as between male and female officers—in terms of their commitment to and intention to remain in the Army. Understanding such differences can assist policy makers in managing retention and maintaining necessary staffing levels within the officer corps.

Focus: This section of the report focuses on whether there are differences in attitudes and career intent based on race, ethnicity, and/or gender.

Findings: Organizational Commitment.

Organizational commitment is assessed by a composite of items asking officers such things as whether they are proud to say they are in the Army, would be reluctant to leave for a civilian job, enjoy the Army community, and would rather be affiliated with the Army than in a civilian job. High scores for the composite indicate high levels of commitment.

There were no statistically significant differences by race or ethnicity in the percentages of officers reporting a high level of commitment to the Army (61% of White and Black officers and 65% of Hispanic officers—Figure 1). However, there was a statistically significant difference between genders with female officers being significantly less likely than male officers to report a high level of commitment to the Army.

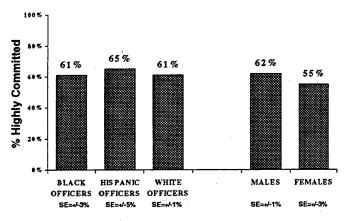

Figure 1. Organizational Commitment

Career Intent. Figure 2 shows percentages for each group who reported that they intend to stay in the Army for 20 or more years or until retirement. Relative to White and Hispanic officers, Black officers are significantly more likely to report an intent to remain in the Army. Female officers are significantly less likely than male officers to report an intent remain in the Army.

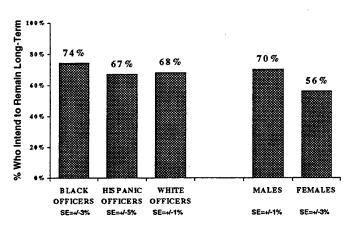

Figure 2. Propensity to Remain in the Army

See Appendix C—Briefing on Differences in Attitudes Toward the Army Among Racial and Gender Groups.

Analysis of Satisfaction with the Army. Figures 3 through 8 show the percentage of respondents who reported that they were satisfied with their supervisors, promotion opportunities, type of work, co-workers, pay, and family issues (satisfaction with pay was assessed by using officers' perceptions of how their pay and benefits compared with the civilian sector).

Black officers were significantly more likely than either White or Hispanic officers to report that they were satisfied with their supervisors, promotions, the work they did, pay, and family issues. The only dimension on which Black officers were *less* satisfied than White officers was satisfaction with coworkers. Hispanic officers, compared to White officers, were more satisfied with pay and family issues; were less satisfied with supervisors and co-workers; and were equally satisfied with promotions and the work they did.

Compared with male officers, female officers were significantly more satisfied with their pay, but were significantly less satisfied with family issues. There were no statistically significant differences between male and female officers' satisfaction with supervisors, promotions, the work they did, or their coworkers.

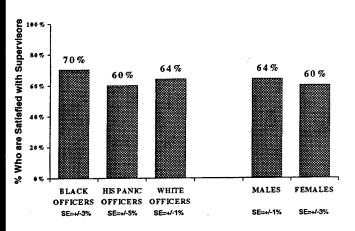

Figure 3. Satisfaction with Supervisors

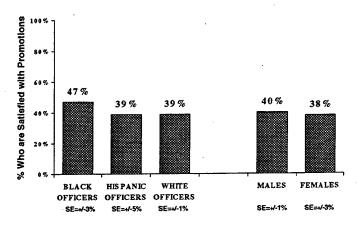

Figure 4. Satisfaction with Promotions

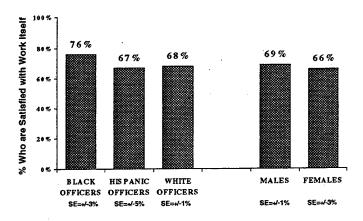

Figure 5. Satisfaction with the Work Itself

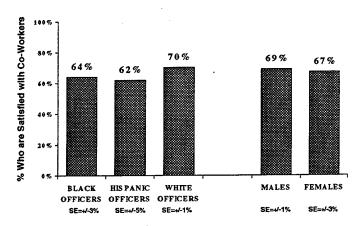

Figure 6. Satisfaction with Co-workers

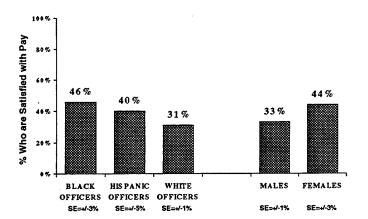

Figure 7. Satisfaction with Pay

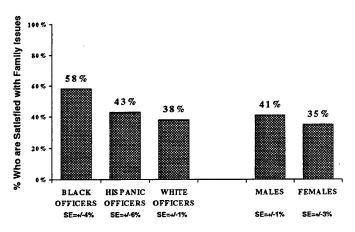

Figure 8. Satisfaction with Family Issues

Met Between Expectations and Duties. Figure 9 shows the degree of fit officers experienced between their initial expectations and their actual branch duties. Fewer female officers than male officers and fewer Hispanic officers than Black or White officers reported that their duties were a close or very close fit with their initial expectations of their branch duties.

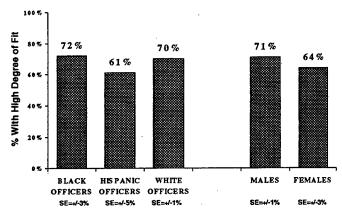

Figure 9. Match of Career Expectations and Duties

Command Opportunities. Figure 10 depicts officers' perceptions of command opportunities within their branches. About three out of four Black (73%) and White (74%) officers reported that their opportunities for command were good, very good, or excellent compared to Hispanic officers (67%) who were less likely to report good, very good, or excellent command opportunities.

Female officers (72%) were as likely as their male counterparts (73%) to report that their command opportunities were good, very good, or excellent.

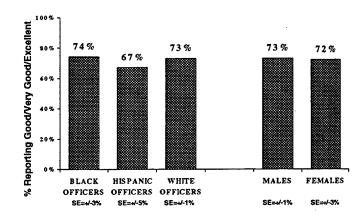

Figure 10. Current Branch Command Opportunities

Choice of Branch. Figure 11 indicates that White officers (71%) were significantly more likely than Black (58%) or Hispanic (56%) officers to report that their current branch was their first choice. Female officers (60%) were significantly less likely than male officers (71%) to report that their current branch was their first choice.

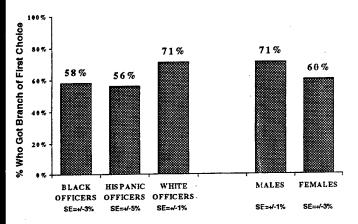

Figure 11. Choice of Branch

Summary. Race/Ethnicity: Several differences in the attitudes of racial/ethnic groups were found. Compared to White officers, a higher proportion of Black officers reported that they intended to remain in the Army long-term, although both groups reported a high level of commitment to the organization.

Black officers were more likely than White officers to report their branch was not their first choice and to express dissatisfaction with co-workers. However, Black officers were more likely to report higher satisfaction with supervisors, promotions, the work they did, pay, and family issues.

No significant difference was found between White officers and Hispanic officers in terms of propensity to remain in the Army; however, Hispanic officers were less likely than White officers to be satisfied with supervisors and co-workers, experience less of a match between career expectations and duties, and were more likely to report that they had fewer opportunities for command. Compared to White officers, significantly smaller proportions of Black and Hispanic officers reported that they received their branch of first choice. Hispanic officers reported higher satisfaction with pay and family issues than White officers did.

Gender: Female officers reported significantly lower satisfaction with family issues; slightly lower satisfaction with supervisors, promotions, work, and coworkers; lower feelings of fit between branch expectations and duties; and fewer received their branch of first choice. Female officers' dissatisfaction with these aspects of their Army careers is accompanied by significantly lower commitment and retention propensity.

Key Findings. Type of branch assignment was not related to the career expectations of company grade officers, except that CA officers were significantly more likely than CS or CSS officers to rate their opportunities for command as very good or excellent. And although officers generally perceived a career in the Army as desirable, they were not especially optimistic about their chances of implementing such a career. Officers rated their expected length of career as shorter than their desired length of career and also reported themselves as considerably less satisfied with their career prospects than they were satisfied with their current assignments or their lives as officers.

There also were statistically significant differences among officers by source of commission, racial/ethnic background, and gender with respect to attitudes toward training, branch satisfaction, career intent, organizational commitment, and various aspects of their jobs. For example, USMA graduates rated their pre-commissioning training more highly than did the graduates of the ROTC scholarship program or the ROTC non-scholarship program, and more USMA graduates reported satisfaction with their branches than did graduates of the other two programs. USMA graduates were least likely to report intent to stay in the Army for 20 years or until retirement than were the ROTC scholarship or non-scholarship groups. This lower level of career intent was related to the USMA graduates' expectations of an easier transition to civilian life and to their perceptions that benefits, career opportunities, and family life would be better in the civilian sector.

Although high levels of <u>organizational</u> <u>commitment</u> did not vary across racial/ethnic (White, Black, Hispanic) groups, Black

officers were more likely than White or Hispanic officers to report their <u>intent to stay</u> in the Army for 20 years or until retirement. Female officers, on the other hand, reported both a lower level of <u>organizational</u> commitment and a lower level of <u>career intent</u> than did male officers.

There also were some differences among groups with respect to dimensions of job satisfaction (supervisors, promotions, work itself, co-workers, pay, and family issues), with Black officers indicating greater satisfaction on five of the six dimensions and female officers reporting less satisfaction with family issues and more satisfaction with pay than male officers.

Implications. Some of the findings described in this report have implications for Army management. For example, if the lower level of career intent for USMA graduates actually results in more of those officers leaving the Army prematurely, what can the Army do to increase retention of such officers, assuming it wishes to do so? As women officers demonstrated lower levels of career intent, what can be done to increase their retention—again assuming that this is a desirable outcome? Because response patterns for both male and female officers indicated that those holding the most unfavorable views of the Army (e.g., concerning the promotion system and downsizing) were most likely to intend to leave the Army, what can be done to change such attitudes?

APPENDIX A

1996 SURVEY ON OFFICER CAREERS

SURVEY APPROVAL AUTHORITY: U.S. ARMY RESEARCH INSTITUTE FOR THE BEHAVIORAL AND SOCIAL SCIENCES SURVEY CONTROL NUMBER: PERI-AO-96-9 RCS: MILPC-3

SURVEY ON OFFICER CAREERS

1996

3.

The Survey on Officer Careers (SOC) continues a research project to track the attitudes and experiences of officers during their careers in the Active Component of the United States Army. The U.S. Army Research Institute (ARI) began this project with the Longitudinal Research on Officer Careers (LROC) Survey which was conducted in 1988, 1989, 1990 and 1992. The SOC gives you an opportunity to provide input into the policy and program decisions impacting all officers. The survey questionnaire covers a wide range of issues related to your job, your career, and the Army. The results will be provided to senior Army leaders for their planning and policy and program decisions. The SOC provides the Army with in-depth coverage of issues and changes in an officer's career and in the officer corps over time.

Thank you for your support for this survey and your dedication to duty!

PRIVACY ACT STATEMENT

- 1. Public Law 93-573 (Privacy Act of 1974) requires that you be informed of the purpose and uses to be made of the information collected.
- 2. The Department of the Army may collect the information requested in this survey under the authority of 10 United States Code 2358. Use of Social Security Numbers is authorized by Executive Order 9397. Providing information in this questionnaire is voluntary. Failure to respond to any specific question will not result in any penalty.
- 4. The information collected in the survey will be used solely for research purposes. Your Social Security Number (SSN) is requested only for linking data files. In accordance with federal regulations, the survey data will be safeguarded to protect your privacy. After we have used your SSN to create the data files, a new identification code will be created to replace your SSN. The file linking your SSN to the new ID code will be placed in a classified safe at ARI. Only survey statisticians with a documented, approved need will have access to the linking file.
- 5. After you have completed the survey, please place the questionnaire in the business reply mail envelope provided, seal the envelope, and mail it.

MARKING INSTRUCTIONS

GENERAL INSTRUCTIONS

Please use a No. 2 pencil.

- Make heavy black marks that fill the circle for your answer.
- Please do not make stray marks of any kind.

INCO	RRE	CT N	IARK	S
α	(X)			

CORRECT MARK $0 0 \bullet 0$

		• • • • • • • • • • • • • • • • • • • •		-
Ø	8		\odot	

Marking all that apply

Sometimes you will be asked to "MARK ALL THAT APPLY." When this instruction appears, you may mark more than one answer.

EXAMPLE:

Did you participate in the Junior Reserve Officer Training Program (JROTC) during high school?

- O No, there was no JROTC program at my high school.
- O No, I did not participate in JROTC in high school.
- Yes, I participated in JROTC during the following grades: MARK ALL THAT APPLY.
 - 9th grade
- 11th grade
- 10th grade
- 12th grade

Marking numbers

Sometimes you will be asked to give numbers for your answer by filling in a grid. If you are asked to give numbers, please record the numbers in the boxes at the left of the grid. then fill in the circles of the grid as shown below.

EXAMPLE:

What year did you complete the most recent course/school you identified

1	ما	9	• ⓐ ●
1	7	3	000 - 000

Selecting only one response

Sometimes you will be asked to mark one response from a list of possible items.

EXAMPLE:

For that most recent course/school identified above, would you say you received it . . . MARK ONE.

- O too early in your career?
- at about the right time in your career?
- O too late in your career?

Using a common scale for more than one question

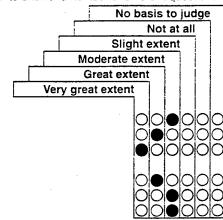

Sometimes you will be asked to "MARK A RESPONSE FOR EACH" to answer a number of different questions.

EXAMPLE:

To what extent did the most recent course/school you have completed . . . MARK A RESPONSE FOR EACH.

prepare you for successful leadership? contribute toward your professional development? instill Army values?

prepare you to perform your current duties? prepare you to perform your current leader tasks? prepare you for your future assignments?

SUMMARY

THERE ARE ATTITUDINAL DIFFERENCES AMONG OFFICERS BASED ON COMMISSIONING SOURCE

USMA officers are most likely to report.

- pre-commissioning training is effective
- they are satisfied with their branch
- things would be better in civilian life
- transition to civilian life would be easy/very easy

Data from the 1996 Survey on Officer Careers (SOC)

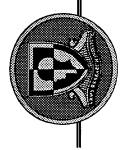

SUMMARY

THERE ARE ATTITUDINAL DIFFERENCES AMONG OFFICERS BASED ON COMMISSIONING SOURCE

ROTC officers are more likely to report

- satisfaction with their jobs
- satisfaction with their careers
- high or very high level of morale
- they intend to stay to retirement

FUTURE DIRECTION

Are the findings from the 1996 SOC different from previous surveys?

Is there a difference in the actual rate of attrition by commissioning source?

Has downsizing had a differential impact?
